Mac Mini Vault creates high density data center solution around Mac Minis.

Franklin, WI September 12, 2011 – Mac Mini Vault announces high density data center solutions built around the quad-core i7 Mac Mini Server.

Mac Mini Vault's customized 48U APC NetShelter cabinets are configured to host up to 140 Mac Minis. The Mac Minis are held in slots on specially designed shelves that slide out allowing for complete access of the ports and power buttons. Each slot is wired for power and network connectivity. Each cabinet is equipped with six APC switched PDUs (Power Distribution Units) that allow for remote power cycling of individual Mac Minis. The power to each PDU is supplied by an APC UPS and backed up by Generac generators. The network connection is tied to a stack of Cisco Gigabit Switches which in turn have redundant fiber connections to the data center's backbone network.

Mac Mini Vault is a part of the CyberLynk Family of Technology Companies. This organizational structure provides the building blocks of great customer service and support. CyberLynk owns the physical data center, IP addressing, and infrastructure. Skilled and experienced CyberLynk Engineers provide around the clock support. Phone support is available during business days as is Free Hands-On Support. The Free Hands-on Support covers any instance where an engineer would need to physically hook up a monitor, keyboard, and mouse to the machine.

Mac Mini Vault offers colocation for all Mac Mini models. The latest version of the Mac Mini Server is a tiny powerhouse that uses the latest quad-core Intel Core i7 processor. The Mac Mini Server can be configured with up to 16GB of DDR3 memory. Storage can be increased to 9TB by using Mac Mini Vault's RAID Storage Vault service. High speed connectivity to future upgrades are possible with the 10 Gb/s Thunderbolt port found on all 2011 model Mac Minis.

Mac Mini Vault is operated by CyberLynk. Mac Mini Vault offers colocation services for Mac computers starting at $29.99USD per month. Mac Mini Vault has specially engineered 48U data center cabinets that hold over 140 Mac Mini computers each. For more information about Mac Mini Vault visit www.macminivault.com.

CyberLynk is a family of technology companies that provide reliable data center services, cloud based hosted applications, and robust business services. CyberLynk has been in business since 1995 and is comprised of a small group of experienced engineers. For more information about CyberLynk visit www.cyberlynk.net.
